#2.8: Custom non-standard solutions – technically complex individual options.

To make your stand more visually attractive and more effective in drawing visitor attention, we recommend considering creative, non-standard stand design solutions. **Below are a few examples for inspiration.**

If this approach interests you, please contact us (the Exhibition Office) to discuss your ideas, requirements, technical options, and budget. **In cooperation with our partners, we can develop and implement customized solutions** - from simple enhancements to fully unique constructions.

Total costs are calculated individually, as they depend on several factors, including size, type and number of suspension or mounting points (ceiling or stand-mounted), printing solution (single-colour or full-colour), materials, and other technical parameters.

	
Lighting truss structures in various sizes and configurations for stand illumination. The solution allows the lighting to be adapted to the stand size and layout, ensuring strong visibility and visual impact. Includes: truss structure rental, installation and dismantling, suspension points, transport, and spotlights for stand lighting.	**Elevated stand header above exhibition walls with custom signage** (above 2.5 m height), available in various dimensions.

Stand branding with a wrapped polycarbonate panel mounted on a truss structure.
Typically installed in the center of the stand or around its perimeter, but partial solutions are also possible — for example, branding only the central section of the stand. This element effectively highlights the stand location in the hall and improves visibility from a distance.The solution includes: truss structure rental and installation, suspension points, transport, and spotlights for stand illumination.

Stand branding with PVC banners mounted on a truss structure around the stand perimeter.
A more cost-effective solution compared to polycarbonate panels. After the exhibition, the banners can be carefully removed and stored (rolled onto a core) for repeated use at future exhibitions. The solution includes: rental of structural elements, banner printing, installation and dismantling, and transport.

Branded lightboxes (sizes from 200 × 100 cm up to 500 × 100 cm) - includes element rental, printed graphics, transport, and installation, suspended from the ceiling using designated suspension points.
